

BADGER Fence

McArthur Cyclone Badger Fence has been specially designed with the aid of expert technical knowledge. McArthur Cyclone understand the requirement for a superior fencing solution.

This particular fence will deny access to badgers, but has the additional benefit of having the same properties as stock fence. This double use, benefits the user, allowing the fencing-in of stock, whilst excluding badgers, or preventing the access of badgers to areas of danger. Stay wires are spaced at 75mm intervals, creating narrow apertures along the fence, simply too small a gap for the animals to gain access, and provides strength and flexibility.

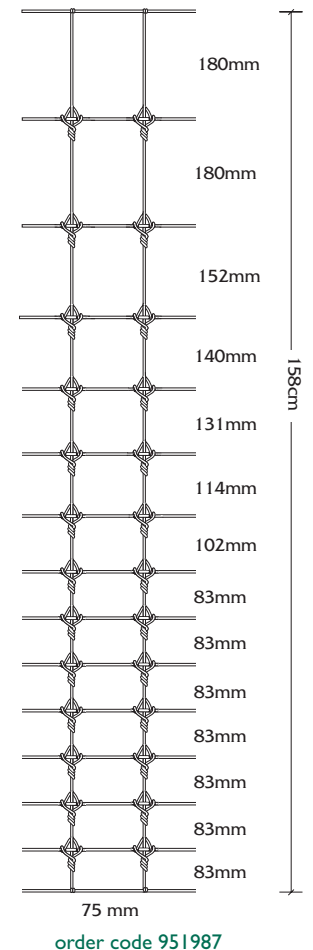

This fence has been designed to be erected below ground level due to the burrowing nature of the badger. It goes without saying that there are absolutely no sharp edges on the wire whatsoever, again creating a safe barrier for wildlife in their habitat. McArthur Cyclone Badger Fence will remain in place and secure for many years, and will continue to be maintenance free.

McArthur Cyclone have the edge over other fences in the market, due to their unique non-slip knot used to secure stay wires to line wires. Most other companies use hinged joints, which can move position. We are proud that we are the only company to offer the protection of the non-slip knot. Cyclone tension crimps create overall rigidity whilst allowing elasticity. We believe that there is not a superior product in the marketplace.

Cyclone Badger Fence is available ex stock from your local McArthur Group branch. The Cyclone brand also includes other high tensile fences designed for enclosure of deer, sheep, cattle, wild boar and horses. Complementing this range, McArthur Group also supplies Kinghitter post drivers and Hayes fencing tools for the professional.

A15 / 158 / 7.5

50m rolls

The fence with the unique non-slip tightlock.
