

HORSE FRIENDLY Fence

McArthur Cyclone Horse Friendly Fence has been designed with the aid of expert equestrian knowledge. McArthur Cyclone understand that these animals require a superior fencing solution. This particular fence has stay wires placed at 75mm spacings, creating narrow apertures along the fence, protecting the horse from becoming trapped, whilst at the same time providing strength and flexibility.

It goes without saying that there are absolutely no sharp edges on the wire whatsoever, again creating a safe barrier for horses in their paddock. McArthur Cyclone Horse Friendly Fence will remain in place and secure for many years, and will continue to be maintenance free.

50m rolls

McArthur Cyclone have the edge over other fences in the market, due to their unique non-slip knot used to secure stay wires to line wires. Most other companies use hinged joints, which can move position. We are proud that we are the only company to offer the protection of the non-slip knot. Cyclone tension crimps create overall rigidity whilst allowing elasticity. We believe that there is not a superior product on the market.

The fence with the unique non-slip tightlock.
